26. Overview of the entity's material responsible business conduct issues

Please indicate material responsible business conduct and sustainability issues pertaining to environmental and social matters that present a risk or an opportunity to your business, rationale for identifying the same, approach to adapt or mitigate the risk along-with its financial implications, as per the following format

Sl. No	Material issue identified	Indicate whether risk or opportunity (R/O)	Rationale for identifying the risk / opportunity	In case of risk, approach to adapt or mitigate	Financial implications of the risk or opportunity (Indicate positive or negative implications)
1	Occupational, Health & Safety	Risk	The company operates with a significant capacity for manufacturing, utilizing multiple processes and handling large steel components. A substantial number of permanent and contractual workers are employed at the plants, making occupational health and safety a critical issue. The safety team has established a long-term objective to achieve a zero-accident workplace. ISO 45001 practices support the company in achieving this objective. The performance of the safety committee is monitored by top management, and there has been consistent improvement in safety performance parameters.	The safety team has established a long-term objective of achieving a zero-accident work environment. ISO 45001 practices contribute to this goal. Top management monitors the performance of the safety committee, which has shown consistent improvement in safety performance metrics.	Implication: Negative

Sl. No	Material issue identified	Indicate whether risk or opportunity (R/O)	Rationale for identifying the risk / opportunity	In case of risk, approach to adapt or mitigate	Financial implications of the risk or opportunity (Indicate positive or negative implications)
2	Human Rights Practices	Risk	Operations-intensive businesses typically involve managing a substantial employee and worker base in addition to a diverse supplier network. Consequently, the implementation of human rights practices is essential to mitigate social risks that could affect the organization and its value chain.	Human rights issues are addressed through established policies and procedures across all manufacturing units, which also encourage compliance among all value chain partners.	Implication: Negative
3	Waste Management	Opportunity	Every manufacturing process inevitably produces some form of waste. Striving for zero waste to landfill represents an ambitious long-term goal that aims to enhance the efficiency of resource utilisation. This approach not only minimises environmental impact but also promotes sustainability by ensuring that every resource is used to its fullest potential.	The company takes a proactive approach to waste management, consistently striving to minimise waste through well-organised Value Analysis and Value Engineering (VA-VE) projects. By implementing these structured initiatives, the organisation has achieved a significant reduction in waste output over time. Additionally, its waste management practices are meticulously designed to ensure compliance with all regulations pertaining to both hazardous and non-hazardous waste materials. Central to the company's waste management philosophy is the 3R principle: Reduce, Reuse, and Recycle. This guiding framework drives all waste management efforts, encouraging innovative strategies to minimise waste generation, maximise resource recovery, and promote sustainable practices throughout the organisation.	Implication: Positive

Sl. No	Material issue identified	Indicate whether risk or opportunity (R/O)	Rationale for identifying the risk / opportunity	In case of risk, approach to adapt or mitigate	Financial implications of the risk or opportunity (Indicate positive or negative implications)
4	Responsible Supply Chain	Risk	As an Original Equipment Manufacturer (OEM) tier-1 supplier, the company does not have direct control over product stewardship; however, it plays a crucial role in promoting sustainability throughout the supply chain. By collaborating with suppliers and ensuring responsible practices, JBML can significantly contribute to the overall environmental and social responsibility of the products it produces. This involvement is crucial for creating a more sustainable future and minimising the ecological footprint of the manufacturing process.	The company has established an environmentally and socially sustainable supply chain by strictly following relevant policies and procedures. This approach has minimised risks and boosts customer confidence.	Implication: Negative
5	Water management	Risk	Water availability and quality are critical to uninterrupted operations across our manufacturing sites and to the well-being of our large blue-collar workforce. A shortfall—whether from drought, declining groundwater tables or tightening regulatory standards—could disrupt production schedules, raise treatment costs, and strain community relations, thereby impacting revenues and reputation.	Our plants are not in any water-stressed areas; however, we have established site-specific consumption targets and implemented water treatment systems (ETP/STP) to reduce freshwater withdrawal. We also focus on continuous monitoring, employee training, and contingency planning.	Implication: Negative

Sl. No	Material issue identified	Indicate whether risk or opportunity (R/O)	Rationale for identifying the risk / opportunity	In case of risk, approach to adapt or mitigate	Financial implications of the risk or opportunity (Indicate positive or negative implications)
6	Product safety and quality	Risk	Delivering defect-free, safety-compliant components is fundamental to sustaining our licence to operate in the automotive value chain. Any lapse whether a dimensional deviation or metallurgical flaw could trigger costly recalls, warranty claims from consumers and production stoppages at our OEM customers, eroding trust and market share.	Acknowledging these potentially severe negative financial and reputational impacts, the Company classifies product safety and quality as a priority material risk. To mitigate this, we maintain IATF-16949 certified quality management systems and deploy advanced error-proofing (Poka-Yoke) and statistical process controls at every workstation and apply rigorous failure mode and effects analysis, control plans during design and pre-production. Real-time digital dashboards track critical parameters, while enhanced supplier audits and "zero-defect" training embed shared accountability across the value chain.	Implication: Negative
7	Greenhouse Gas Emissions	Risk	Environmental sustainability has consistently been a fundamental concern for our organization, underscored by one of our core values: "Safe & Green". This commitment reflects our dedication to ensuring that our practices not only protect the planet but also promote the well-being and safety of our communities. By integrating eco-friendly initiatives into our operations, we strive to create a harmonious balance between growth and environmental responsibility.	In a proactive approach to environmental sustainability, the company has strategically aligned its greenhouse gas (GHG) reduction roadmap with the national Net Zero Target. This alignment involves setting clear projections for scope 1 and scope 2 emissions and defining a specific net zero year to work towards. Currently, the company is diligently developing a comprehensive long-term mitigation plan that outlines the necessary actions and initiatives to successfully achieve this ambitious net zero target, ensuring a meaningful contribution to combating climate change.	Implication: Negative

Governance, leadership and oversight

- 7 Statement by director responsible for the business responsibility report, highlighting ESG related challenges, targets and achievements (listed entity has flexibility regarding the placement of this disclosure)
- This is our Fourth Business Responsibility and Sustainability Report (BRSR) for the period from April 1, 2025, to March 31, 2026. Under the guidance of the Board and its CSR & Sustainability Committee, this report illustrates how the Company is integrating Environmental, Social, and Governance (ESG) considerations into our strategies, financial decisions, and daily operations, thus reinforcing our fundamental value of being “Safe & Green” and enhancing our resilience in a rapidly changing business environment.

Strong governance underpins the achievement of ESG objectives and long-term goals. The Board’s Code of Conduct mandates the highest standards of integrity and transparency across all levels of management, with no reported violations or regulatory penalties in the past year. Adopting a double materiality lens, we updated our materiality assessment through comprehensive engagement with key stakeholders, including employees, customers, suppliers, communities, and regulators. This process evaluated both the financial relevance of ESG factors to JBML and the Company’s wider environmental and social impacts, ensuring that both dimensions of materiality are clearly embedded in the disclosures and targets outlined in this BRSR.

Our environmental metrics have improved over last FY with increased production leading to economies of scale. Total energy used was 2,53,390 GJ, which included 17,399 GJ from renewable electricity leading to a RE contribution % increase from 1.9% to 6.8% YoY. Energy intensity reduced from 1.01 to 0.99 GJ per ₹ lakh of turnover. Scope 1 and Scope 2 Green House Gas (GHG) emission intensity reduced from 0.17 to 0.16 TCO₂e per ₹ lakh of turnover. Water intensity reduced from 0.87 to 0.49 KL per ₹ lakh of turnover, while waste intensity remained constant at 0.20 Tonnes per ₹ lakh of turnover.

Employee well-being remains central to JBML’s performance philosophy. Through an ISO 45001-compliant safety management system, Behaviour-Based Safety (BBS) training, Machine Control Safety (MCS), and real-time digital monitoring, we recorded zero lost-time injuries for both employees and workers. All facilities were assessed for health, safety, and working conditions, with every worker receiving orientation at our Dojo centres. In addition, employees and workers benefit from non-occupational healthcare, group personal accident insurance, and wellness programs such as the “Sankalp Siddhi” initiative that promotes healthy lifestyles. We also evaluated 89% of our suppliers, based on value of business done, against JBML’s Supplier Code, reinforcing labour rights, environmental stewardship, health and safety practices, and human rights across the value chain.

Our community initiatives continue to advance across key areas including cleanliness, healthcare, education, skill development, and heritage conservation, amplified by growing employee volunteer participation. Looking ahead, we plan to establish science-based short-term emission reduction targets, expand on-site renewable energy capacity, increase female representation in managerial roles, achieve full compliance with supplier ESG standards, and enhance data assurance to build greater stakeholder trust. On behalf of the Board, I extend sincere appreciation to our employees, partners, and communities for their unwavering support as we work to deliver enduring value and contribute meaningfully to India’s sustainable development agenda.

Leadership Indicators

1	Provide the processes for consultation between stakeholders and the Board on economic, environmental, and social topics or if consultation is delegated, how is feedback from such consultations provided to the Board.	At JBML, the stakeholder engagement mechanism is a key driving force toward strengthening stakeholder relationships. During the year, the company conducted a materiality assessment survey in which the stakeholders expressed their opinion on material issues. The same is being used to formulate the ESG strategy of the company.
2	Whether stakeholder consultation is used to support the identification and management of environmental, and social topics (Yes / No). If so, provide details of instances as to how the inputs received from stakeholders on these topics were incorporated into policies and activities of the entity.	Yes. We consistently engage with stakeholders to actively contribute to the materiality assessment process. Through ongoing interactions with both internal and external stakeholders, we identify significant issues that have an impact on our capacity to generate value. These noteworthy matters are thoroughly reviewed each year, considering their relevance to management procedures, risk evaluation, and strategic aims.
3	Provide details of instances of engagement with, and actions taken to, address the concerns of vulnerable/ marginalized stakeholder groups.	Yes, Stakeholder consultation is used to support CSR initiatives for addressing environmental and social issues.
